HALLO 1YS

1YS is a new version labeler and can be used as a printer

● **1YS can be used as a label printer**

It can imprint without peeling off labels from the backing paper. So it can be used as a label printer.

● **Easy to load a label roll**

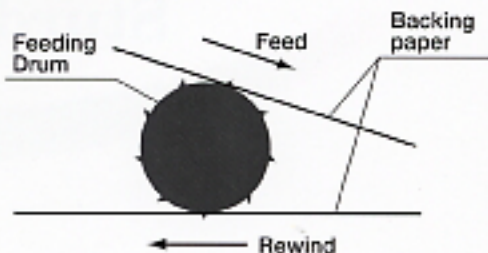

The stamp-receiver has been so improved as to open 180 degrees. So it has become much easier to load a label roll.

● **Precise imprinting**

New label feeding mechanism has made it possible to feed and imprint data on plain/preprinted labels more precisely.

● **Clean printing surface and indicator**

The printing band stopper function prevents the printing surface and indicator from being stained by ink.

● **One-touch ink roller loading**

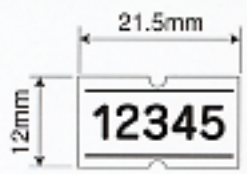

By pushing the ink-roller-set-lever, the ink rollers can be easily changed.

1YS Layout Example
